

Vimoutiers to Lisieux

France - Normandie

Basilique Sainte-Thérèse à Lisieux (Amis de saint Colomban)

Pleasant journey along small roads, a greenway and trails.

After a short, gentle climb, the Via Columbani descends for 13 km to Le-Mesnil-Durand. This is followed by two climbs and the rapid descent to Lisieux.

Useful information

Practice : Pedestrian

Duration : 8 h

Length : 31.6 km

Trek ascent : 305 m

Difficulty : Difficult

Type : Step

Trek

Departure : Notre-Dame Church, 1 avenue du Général-de-Gaulle, 61 120 Vimoutiers

Arrival : Saint-Pierre Cathedral, place François Mitterrand, 14100 Lisieux

Cities : 1. Normandie

Altimetric profile

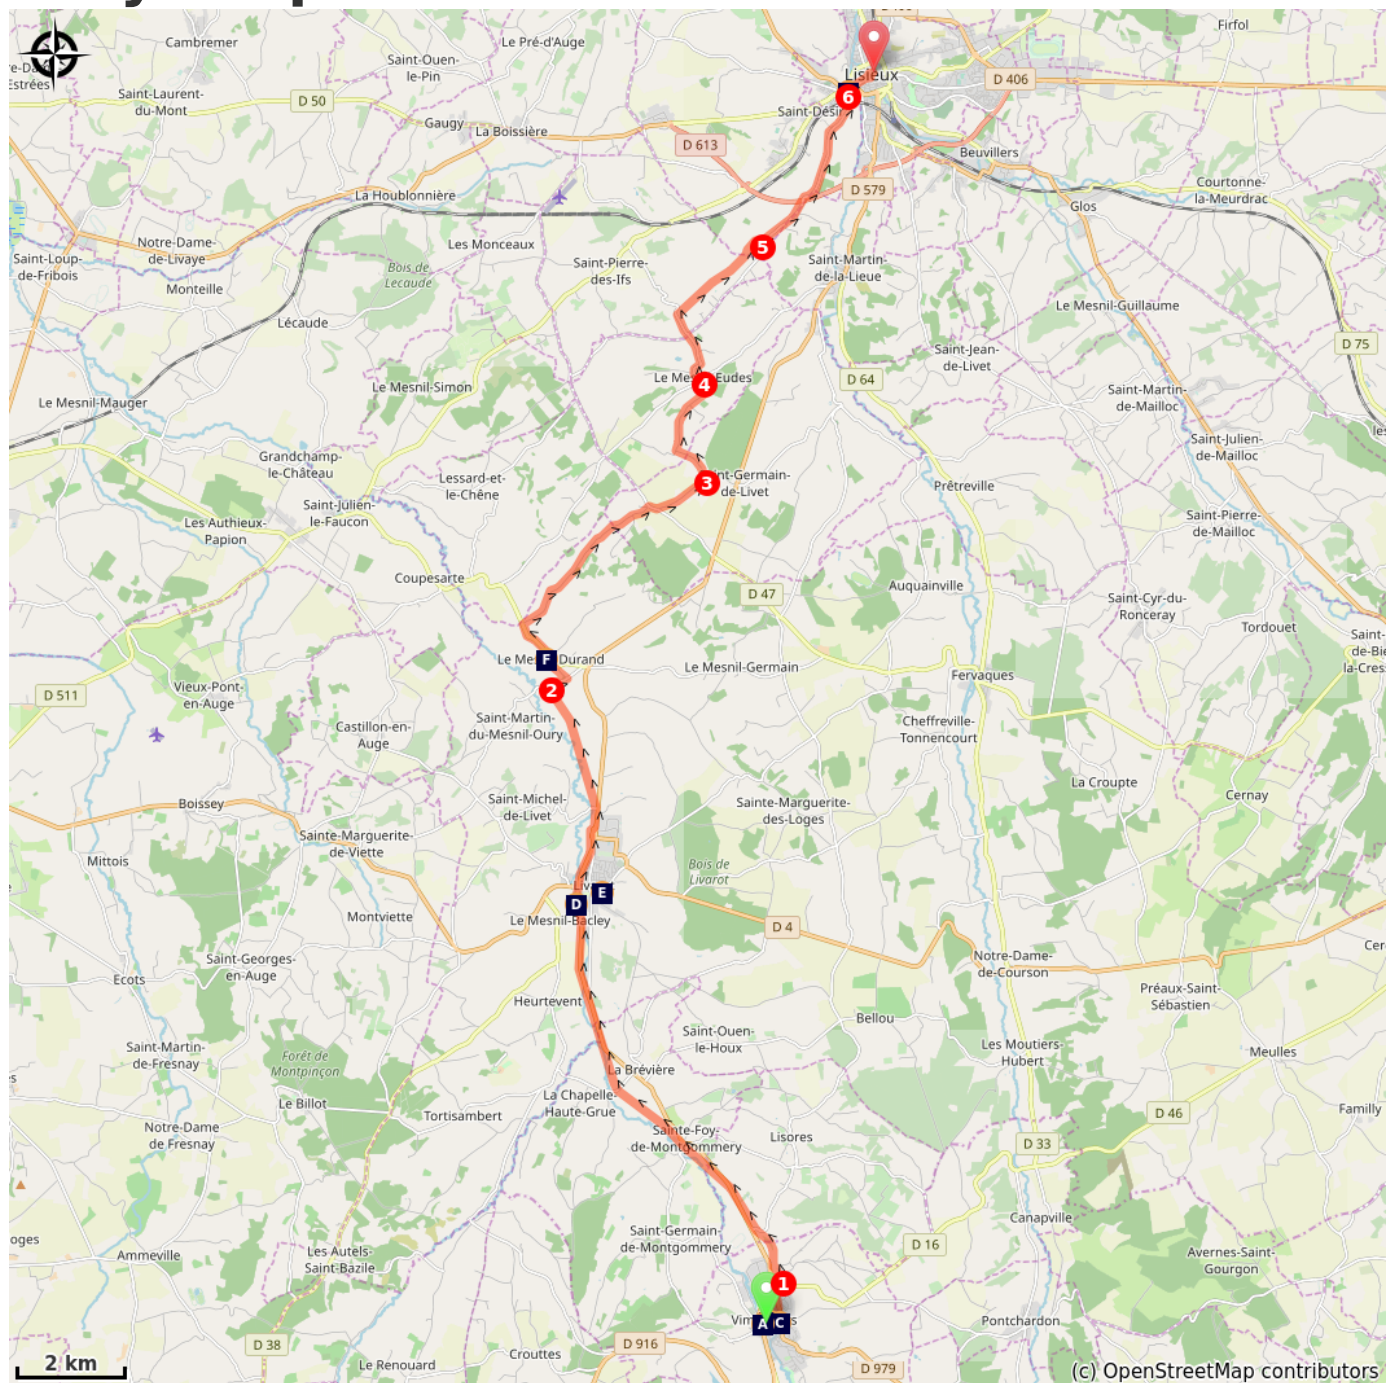

Min elevation 46 m Max elevation 180 m

Notre-Dame de l'Assomption Church in Vimoutiers (A)

The new church of Vimoutiers, built at the end of the 19th century, is a neo-Gothic building. It replaces the 16th century church, which was already enlarged but became too small due to the town's expansion in the 19th century. It was built between 1888 and 1896, and its dimensions and decoration bear witness to the ambition of its builders.

Its two spires reach for the sky and its construction, made of granite, limestone and ashlar, has resisted the onslaught of time and the bombing of the city on 14 June 1944, which pulverised the stained glass windows. The town of Vimoutiers asked the master glassmaker of Chartres, Gabriel Noire, famous for his stained-glass windows with reinforced cement crimping to replace the traditional lead.

The church's stained glass windows tell the story of Normandy and the Pays d'Auge: the Vikings, the monks of Jumièges, Joan of Arc, the Camembert, etc.

The MH listed organ, the last organ created by Aristide Cavaillé-Coll (the twin of this organ, built at the same time, is in Moscow). It is the largest organ in the Orne department (3 manuals, 1800 pipes). Aristide Cavaillé-Coll built 499 organs, including the one in the church of Notre-Dame de Paris. The organ was restored in 2018.

Camembert Museum in Vimoutiers (B)

The Camembert of Normandy, this emblematic product of Normandy and French gastronomy, known worldwide, has had an Appellation d'Origine Contrôlée (AOP) since 1983.

Today, the production of this genuine Camembert of Normandy, meeting the precise specifications of the PDO, is carried out by a dozen producers, including only two farmers.

The Vimoutiers Camembert Museum, in the heart of Normandy, offers you the opportunity to discover the secrets of making this world-famous product.

The Camembert Museum is also thinking of your taste buds, as it offers you a tasting of PDO Normandy Camembert accompanied by a glass of apple juice or organic cider.

Former Convent of the Benedictine nuns at Vimoutiers (C)

The Benedictine nuns lived here from 1650 to the Revolution. The half-timbered pavilion, however, predates the arrival of the nuns by almost a century. It seems that this building was, in its early days, an aristocratic residence and at the same time a defensive element of the town. Its loopholes and its location at a street entrance seem to indicate that it was a fortified residence whose role was to defend the entrance to the town. The house is made up of two adjoining buildings. The oldest part dates from the end of the 16th century.

Via Columbani on a new Greenway in 2019 (D)

This track corresponds to the old railway line, set up in 1881, which ceased to be used after the closure of Livarot station in 1989.

The greenway was created in 2019 with two separate surfaces, one for bicycles and one for pedestrians.

Saint-Ouen Church of Livarot (E)

The oldest parts of the church date back to the 15th century and were extensively rebuilt in the 19th century. The original construction of the church consisted of a chancel and a rather narrow nave without aisles; the tower dates from the same period, as does most of the western façade.

In the 16th century the church was considerably enlarged or rather almost completely rebuilt.

Saint-André Church in Mesnil-Durand (F)

The church dates from two distinct periods: the end of the 13th century for the construction of the nave, and the Romanesque period for the choir. The choir, which is narrower than the nave, is pierced by two windows (probably in the 15th and 16th centuries), in a symmetrical manner. On the south side of the choir is a portal decorated with a zigzag archivolt and carved columns, also from the 12th century.

Saint-Désir Church, in Lisieux (G)

The original parish church, as well as the convent Notre-Dame-du-Pré which was affiliated to it, were completely destroyed by the bombings of 1944. In 1946, the rubble was cleared away, but it took another ten years before the church was rebuilt.

Robert Camelot, chief architect for the reconstruction of Lisieux, was in charge of the work, which took place between 1956 and 1962. Unlike the classical churches, the architecture is considered to be one of the most remarkable achievements of the Reconstruction.

Cathedral Saint-Pierre in Lisieux (H)

Rare monument of Lisieux, survivor of the bombings of 1944, the cathedral Saint-Pierre de Lisieux is a monument of Gothic style. If the presence of a cathedral is supposed since the 6th century, the church visible today was certainly built between 1160 and 1230.

Like many Norman churches, the external decoration of the cathedral of Lisieux is sober. For example, there are no sculpted statues on the facades of the portals. Only geometrical patterns, foliage, small columns or arcatures animate the stone. Small sculpted faces are the only fantasy elements on the outside.

The cathedral should not be confused with the Basilica of Saint Theresa of Lisieux, which is a 20th century basilica inspired by the Byzantine style.
